

**DOUBLE PIVOTING REAR CLOSURE**

**ABSTRACT OF THE DISCLOSURE**

A rear closure assembly for use with a vehicle includes a door having first and second handles for pivoting the door about first and second vertical pivot axes. Latches on the door are engageable with strikers on the vehicle. The latches and strikers form the first and second vertical pivot axes. The latches are disengageable by the handles to selectively pivot the door about one of the vertical pivot axes.
